New THp-Grip™ polyurethane tires excel in wet conditions

Thombert's latest product release suited for electric lift trucks in a variety of warehousing applications.

Thombert's new THp-Grip™ tires provide improved traction for electric lift truck operation on damp or wet surfaces. "A specially designed hole pattern provides for better grip, better braking and improved safety on wet surfaces," states Reggie Collette, Sales Marketing Manager for Thombert.

The THp-Grip™ product is available in three compounds: Dyalon® B (83 durometer), Dyalon® J (90 durometer) and Dyalon® A (95 durometer). "These three compounds," says Collette, "will meet operating requirements in just about any produce or cold storage facilities. And in keeping with Thombert's standards for performance, they offer good load capacity with excellent resistance to chunking and tearing, typically with longer service life than other tread types." Thombert's products, including THp-Grip™, are backed by a money-back guarantee.

Thombert is North America's largest manufacturer of polyurethane wheels and tires for narrow aisle electric lift trucks. Products are distributed throughout the Americas and Europe. Thombert offers replacement wheels and tires through a national network of dealers as well as providing product for leading lift truck OEMs.
